Evening Brief

Date/Time Stamp: **Monday, August 08, 2016 - 11:47 PM**

Weather Summary

**** HIGH RISK - Tuesday for Wind/Low RH/Dry Fuels Parts of SE ID, NW UT, and W Wyoming *****

A cold front will move into the area on Tuesday and gusty winds will develop again in the afternoon, and speeds will bump up into the 30 to 40 mph range. Winds will be strongest across NW Utah, SE Idaho and W Wyoming. Winds will be gusty further south into Utah and portions of Nevada, but these areas have been wetter and fuels are not as primed. One concern with the increasing winds tomorrow afternoon is the potential for holdovers as copious amounts of lightning have been observed over the past few days. Also of note, wind direction will transition from southwest to west/northwest tomorrow afternoon.

On Wednesday, winds will decrease across the area. Afternoon thunderstorms are expected to develop across SE Utah due to lingering moisture in the area.

Temperatures will remain a few degrees below normal on Thursday as another disturbance passes to the north of the area. High pressure will build Friday through the weekend leading to a warming drying trend with generally light and terrain driven winds across the area.

Preparedness Levels

Current:

Great Basin	4
National	3

Great Basin Fire Activity: Light Initial Attack

New Fires and Acres: 22 fires for 7398 acres / 2,636 Large Fire Growth

Resources:

- IMT 3 Cain ordered for 2016 Nevada BLM Support
 - There are 2,817 personnel committed to large fires within the Great Basin
 - 83 Aircraft Assigned
 - 23 Type 1 & T2 Helicopters
 - 220 Engines Assigned
 - 17 Engines currently on Preposition/Staging orders
 - 92 Crews Assigned
 - 14 Type 1 IHC assigned
 - 21 crew orders pending for Great Basin incidents
 - National and initial attack resources within the Great Basin are heavily committed. Competition for resources is substantial.

Great Basin Fire Potential Summary

***** Fuels at Record Dry Levels in Many Areas over the Northern Half of the Great Basin *****

ERCs which have increased significantly **into the 90th to 97th percentile** across most areas (except for the southern 3rd of the Great Basin).

Fuels will remain most critical across some areas of Western and Northern NV which have not had widespread wetting rains for nearly 2 months.

Live fuel moisture across much of the northern half of NV, northern UT and parts of ID are near or at record dry levels as well. These existing extremely dry fuel conditions across Idaho/Western and Northern Utah/Wyoming will play a critical role in fire potential for holdovers from recent lightning, or new lightning starts.

A Fuel and Fire Behavior Advisory is also in effect for the Northern half of Nevada, Southwest Idaho and Northwest Utah.

For more detail, see Great Basin 7-Day Fire Potential Outlook
